DRONE DETECTION SYSTEM DEPLOYED AT ABBOTSFORD AIRSHOW; LOCATED DRONES AND PILOTS MORE THAN 20 KILOMETRES AWAY

August 21, 2019 Using a system provided by Bravo Zulu, which specializes in drone countermeasures and is a subsidiary of BC's InDro Robotics, operators were able to scan for any RPAS to ensure the show's airspace remained secure.

"We had it there to protect the crowds and the pilot of the aircraft from drone strikes. If a jet were to collide with one or have it sucked into the motors that could be devastating – not just to the pilot of the aircraft but also to the spectators," says Abbotsford Police Department Constable Robert Hryhorczuk, who spearheaded security at the event and is also the department's RPAS lead (as well as a former private pilot).
